PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 1.5+ years of professional experience building and maintaining scalable ERP, Fintech, and business management systems using PHP, Laravel, React, MySQL, and AWS. Experienced in developing multi-tenant applications, secure RESTful APIs, financial workflows, and data-driven business solutions. Proven ability to automate complex business processes, improve operational efficiency, and build reliable systems for high-volume transactional environments. Currently working as a PHP Developer, leading development initiatives, mentoring developers, and improving legacy systems through modern engineering practices.

PROFESSIONAL EXPERIENCE

PHP Developer NegoiT (PVT) Ltd

Mar 2026 – Present

- Lead end-to-end development and maintenance of a high-traffic ERP/POS system supporting 10 companies, 10+ branches, and multiple retail stores, using PHP and MySQL for complex business and transactional workflows.
- Design and maintain secure financial and transactional systems processing approximately 100 invoices/transactions daily, ensuring data integrity and reliable business operations.
- Optimized 30+ database queries and system modules and modernized a 50+ module legacy PHP system, improving overall application performance by approximately 70% and enhancing reliability.
- Automated repetitive business processes, reducing manual operational effort by approximately 40%, while collaborating with finance/operations teams and mentoring 2 developers on technical decisions and code quality.

Software Engineer (Junior) Appleholidays Destination Services (PVT) Ltd

Mar 2025 – Feb 2026

- Architected and maintained a multi-tenant ERP system using Laravel, React, and MySQL, supporting 3 companies, 3 locations, and 8 accounting users, with approximately 200 invoices/transactions processed daily.
- Developed and maintained 10+ ERP modules, including admin and supplier dashboards, streamlining order management and supplier coordination across 50+ suppliers and reducing manual operational effort by approximately 70%.
- Developed 30+ secure RESTful APIs for managing commercial hotel and lifestyle data across 4 countries, implementing authentication, authorization, and data validation mechanisms.
- Collaborated with a 5-member development team and assisted with AWS production deployments using EC2 and RDS, supporting application stability, security, and reliable business operations.

Software Engineer (Internship) Appleholidays Destination Services (PVT) Ltd

Oct 2024 – Mar 2025

- Contributed to the development of admin and supplier dashboards using Laravel and React, implementing new features and collaborating with senior developers.
- Developed responsive web features for internal business systems using Laravel and React.
- Assisted with MySQL and MongoDB database optimization, improving query efficiency and application response times.
- Supported the setup and maintenance of CI/CD pipelines using AWS and Kubernetes, gaining hands-on experience with automated deployments and DevOps workflows.

EDUCATION

Bachelor of Information And Technology

Feb 2020 – Sep 2024

University of Colombo School of Computing, Sri Lanka

CORE COMPETENCIES & SKILLS

- **Languages:** PHP, JavaScript, SQL, HTML5, CSS3
- **Backend:** Laravel, REST APIs, RESTful Architecture
- **Frontend:** React.js, Next.js
- **Databases:** MySQL, PostgreSQL, MS SQL Server, MongoDB, Redis
- **Cloud & DevOps:** AWS, Docker, Kubernetes, GitHub Actions, Jenkins, CI/CD
- **Testing & Tools:** PHPUnit, Postman, Git, GitHub
- **Engineering:** OOP, Data Structures & Algorithms

KEY PROJECTS

ERP System for Multi-Company Management. [link](#)

Technologies: Laravel, React, MySQL, AWS, Sanctum Auth

- Architected a multi-company ERP, automating finance workflows that reduced manual effort by 70% and improved accuracy.
- Engineered comprehensive accounting modules for real-time P&L tracking, accounts payable, and cross-company financial reporting.
- Deployed a secure, scalable multi-tenant system on AWS featuring automated tax calculations and centralized data management.

Route Optimization & Fleet Tracking API [link](#)

Technologies: Laravel 13, React 19, MySQL, Pusher, Laravel Echo, OSRM, Gemini AI, Sanctum, Tailwind CSS, Vite

- Built an OSRM-powered route-planning API with a nearest-neighbor heuristic and AI-generated route summaries via Gemini AI SDK, optimizing 10–20 stop batches in milliseconds.
- Implemented real-time GPS tracking with Pusher WebSocket broadcasting and strict multi-tenant data isolation via Laravel global query scopes across 10+ database tables.
- Designed an append-only COD ledger with automated daily reconciliation and a server-side delivery status state machine, validated by 15+ PHPUnit tests and a GitHub Actions CI pipeline.

SaaS Multi-Tenant Invoicing & Billing Platform [link](#)

Technologies: Laravel 13, React 19, Supabase(PostgreSQL), Stripe API, Sanctum Auth, Gemini AI

- Architected a secure multi-tenant SaaS with Laravel 13 and Supabase, enforcing data isolation via global Eloquent scopes and RBAC (Admin/Accountant/Viewer) with Spatie Permission. Added immutable audit logs and rate limiting for enterprise-grade security.
- Engineered an automated invoicing engine with server-side calculations, strict invoice lifecycle (Draft → Sent → Paid → Overdue), and partial payments. Integrated Stripe Checkout & webhooks for real-time payment verification and automatic status updates.
- Integrated Google Gemini AI with human-in-the-loop guardrails for invoice generation, overdue reminders, and business insights. Built a recurring billing engine using Laravel Scheduler and QStash to auto-generate invoices on subscription cycles.

LANGUAGES

- English – Professional Proficiency
- Sinhala – Native Proficiency
